Inventaris Fitur
Sistem BELLA / Stagging Body

Audit source code lokal - route, controller, view, dan command

Tanggal audit	2 September 2026
Workspace	D:/fabian/00_Project/stagging-body
Cakupan	Fitur aplikasi web Laravel, API, halaman Blade, dan background command yang terdeteksi dari kode lokal.

Catatan: dokumen ini adalah daftar fitur berdasarkan source code yang tersedia di workspace. Validasi role, menu aktif per user, dan kondisi live environment tidak diuji di sini.

Ringkasan modul utama:

No	Modul	Ringkasan Fitur
1	**Dashboard & Monitoring**	Portal utama, dashboard overview, KPI operasional, chart stock/mutation, notifikasi BELLA, AI analyst endpoint, receiving dashboard, dan progress pulling.
2	**Loading List & Delivery**	List loading list, detail loading list, pencarian manifest, fetch/store loading list dari PDS, dashboard delivery, master cycle, driver attendance, dan notifikasi unfinished delivery.
3	**Pulling / PPIC**	Scanner pulling customer/internal, AG mode, scan history, mutation checkout, alamat chute, EDCL, reorder setting, kanban reset scan/manual, dan realtime SSE.
4	**Production**	Scan produksi umum dan per line, AS523, AS547, PC2B, direct scan, part scan, assign kanban, sample/line check, stop problem, PRD report, result, plan, board, dan stock adjustment.
5	**Production Stock**	Monitoring current stock vs standard stock per line/back number, status stock, import template/import stock, export, recalculation, dan adjustment via mutation.
6	**PIS**	Scan PIS loading list, packing flow, related PDS/loading list, master PIS, image preview/storage, validasi, scan list, update detail scan, dan export history scan.
7	**Quality QC Gate R1**	Dashboard quality, scan/lookup kanban, penyimpanan inspeksi QC, history, export Excel/detail, detail inspection, pareto defect/part, dan approval inspection.
8	**Master Data**	Master mold, internal part, customer part, relasi mold-part, upload/import part, foto part, customer mapping, PIS master data, master cycle, dan master alamat chute.
9	**Injection**	Dashboard injection, PRD report injection, direct page, mold check, internal part lookup, scan part mold, stop/release, list problem, dan input problem/setup/QC check.
10	**Validation & Traceability**	Halaman validation dan kanban pairing; tersedia layout traceability untuk flow khusus.
11	**Admin, User & Device**	Login/register/logout, profile, preferences, manage user CRUD + bulk upload, monitor device/session, heartbeat, reset device, label device, error report, dan global search.
12	**Error Log & Support Tools**	Error log client/server, halaman log error, export log, stock dashboard mock, Nidec page, dan endpoint utilitas.

Daftar Modul & Fitur Utama

Bagian ini merangkum fitur yang tampak aktif dari kombinasi route, controller, view Blade, dan command. Aku kelompokkan berdasarkan proses bisnis agar mudah dipakai sebagai dokumentasi internal.

1. Dashboard & Monitoring

- Portal launcher untuk user login maupun guest.
- Dashboard overview: KPI, slot overview, stock status, mutation/stock export, dan endpoint data async.
- BELLA notification center dan AI analyst endpoint untuk membaca kondisi operasional.
- Receiving dashboard untuk monitor data receiving beserta modal/detail.
- Progress Pulling dashboard untuk melihat progress penarikan terhadap kebutuhan loading list.
- Production landing, result, plan, dan board sebagai layar monitoring produksi.

Evidence: DashboardController, pages/dashboard_*.blade.php, /dashboard/* routes.

2. Loading List & Delivery Operation

- Halaman loading list utama dengan filter data, pencarian manifest, dan update incremental.
- Detail loading list: daftar part, kebutuhan kanban, aktual pulling, comparison production-vs-pulling, dan delete mutation tertentu untuk admin/master.
- Fetch/store loading list dari PDS, termasuk store detail massal.
- Dashboard delivery: data table, chart cycle, stacked chart, progress cycle, customer-cycle chart, dan sync loading list.
- Master cycle delivery CRUD untuk menjaga target/cycle per customer.
- Driver attendance/absen: scan customer, pilihan cycle, data attendance, dan submit attendance.
- WhatsApp notification untuk delivery yang belum selesai melewati Finish Preparation.

Evidence: LoadingListController, pages/loadingList*.blade.php, pages/dashboard_delivery.blade.php.

3. Pulling / PPIC

- Scanner pulling utama untuk customer kanban dan internal kanban.
- Cek customer part/internal part, termasuk parameter PDS untuk konteks loading list.
- Pencatatan mutation checkout dan scan history.
- Mode AG pada scanner dikirim dari frontend dan disimpan saat scan.
- Alamat chute lookup dan master alamat chute CRUD/import/template/clear-all.
- Pulling setting dan reorder delivery time/manual item.
- Kanban reset dengan dua cara: scan barcode atau input manual back number + serial number.
- EDCL integration: store, detail, cancel.
- Direct Pulling realtime stream memakai SSE.

Evidence: PullingController, pages/pulling/*.blade.php, DirectPullingSSEController.

4. Production

- Halaman scan produksi umum dan halaman line khusus AS523, AS547, PC2B.
- Scan kanban per line, part scan, dan assign kanban ke part scan.
- Direct production scan dengan middleware token DEA.
- Line check dan sample check untuk validasi proses produksi.
- Current scan count, target scan, dan reset scan count per line.
- PRD report: input/report problem, stop/release, kategori stop, dan list problem.
- Production result, production plan, board, dan board state untuk monitoring output.
- Current stock adjustment di production stock yang dicatat melalui mutation adjustment.

Evidence: ProductionController, DashboardController production methods, pages/production/*.blade.php.

5. Production Stock & Inventory

- Monitoring current stock vs standard stock per line/back number.
- Status stock seperti kurang dari standard, sesuai, atau over stock.
- Import template stock dan import stock dari Excel.
- Export stock/mutation untuk audit data.
- Recalculate stock dari mutation lewat command stock:recalc.
- Adjustment current stock menjaga konsistensi stock setelah proses recalculation.

Evidence: pages/production/prodstock.blade.php, DashboardController::productionStock*, ProductionController::adjust, RecalculateProductionStock.

6. PIS

- PIS scan index untuk scan loading list/PDS.
- Packing page untuk flow packing terkait PIS.
- Get loading list data dan get related scan by PDS.
- Save scan, update scan detail, dan scan list/history.
- Export scan list.
- Master PIS: add/update/delete/search/validasi.
- Image handling: lookup image, storage image dari disk, preview image.

Evidence: PisController, resources/views/pis/*.blade.php, /pis routes.

7. Quality QC Gate R1

- Dashboard quality dengan summary dan recent inspections.
- Halaman /quality/scan untuk scan QC.
- Lookup kanban sebelum inspection.
- Store inspection beserta detail standar/hasil pengecekan.
- History inspection dengan filter process.
- Export history Excel dan export detail inspection.
- Detail inspection/show.
- Pareto analysis untuk top defects dan top parts.
- Approval inspection untuk hasil yang perlu approval.

Evidence: QualityController, pages/quality/*.blade.php, /quality routes.

8. Master Data

- Landing dashboard master dengan statistik.
- Master molds CRUD dan mapping mold ke part.
- Master internal parts CRUD, foto part, line, back number, dan data pendukung.
- Master customer parts CRUD dan relasi customer part ke internal part/customer.
- Template/import master part dari dashboard.
- PIS master untuk part PIS dan image terkait.
- Master cycle delivery dan master alamat chute sebagai master operasional.

Evidence: MasterDataController, PisController master methods, LoadingListController master cycle, PullingController master alamat chute.

9. Injection

- Dashboard injection.
- PRD report injection.
- Direct injection page.
- Mold check berdasarkan mold code.
- Lookup internal part dari customer part.
- Simpan hasil scan part anggota mold.
- Stop/release injection dan input/list problem setup/QC/problem.

Evidence: InjectionController, pages/injection/prdreport.blade.php, /injection routes.

10. Admin, Security, Device & Support

- Login, register, logout, dan refresh token DEA.
- Profile update dan change password.
- Settings/preferences user.
- Manage user CRUD, template download, bulk upload.
- Manage device/session: heartbeat, reset applied, report error, label, reset, delete, monitor partial refresh.
- Global search.
- Error log store, list, AJAX data, dan export.
- Custom error pages 403/404/419/500/503.

Evidence: LoginController, RegisterController, ProfileController, SettingsController, ManageUserController, ErrorLogController.

11. Integrasi API & Background Job

- API production-items untuk konsumsi data item produksi.
- API v1 scan line, injection post/import, login API, dan update qty production plan.
- Sync loading list dari SQL Server ke database lokal.
- Sync external deliveries dari SQL Server ke MySQL lokal.
- Generate/update/materialize production plan.
- Check late deliveries dan send notification untuk supplier/delivery unfinished.
- Cleanup expired sessions, update photos, seed missing kanban, clean duplicate internal parts.

Evidence: routes/api.php, app/Console/Commands/*.php.

Route & Endpoint Penting

Tabel ini bukan route-list lengkap satu per satu, tetapi peta endpoint utama per modul agar pembaca cepat tahu area sistemnya.

Modul	Route/Endpoint Kunci
Dashboard	/, /dashboard, /dashboard/overview, /dashboard/overview/data, /dashboard/overview/ai-analyst, /dashboard/bella/notifications, /dashboard/overview/slot, /dashboard/receiving/*
Loading List	/loading-list, /loading-list/{loadingList}, /loading-list/manifests, /loading-list/fetch/{pds}, /loading-list/store*, /loading-list-detail/{detail}/comparison
Delivery	/dashboard/delivery, /dashboard/delivery/data, /dashboard/delivery/sync-loading-lists, /dashboard/delivery/*chart*, /dashboard/delivery/master-cycles
Driver Absen	/loading-list/absen-driver, /loading-list/absen-driver/data, /scan-customer, /cycles, /submit
Pulling	/pulling, /pulling/customer-check/{customer}/{pds?}, /pulling/internal-check/{internal}/{isinternal?}, /pulling/store, /pulling/post, /pulling/mutation, /pulling/scan-history
Pulling Master	/pulling/settings, /pulling/settings/reorder*, /pulling/manual, /pulling/master-alamat-chute*
Production	/production, /production/as523, /production/as547, /pc2b, /production/store, /production/store2, /production/part-scan, /production/direct, /production/adjust
Production Monitoring	/dashboard/production/stock, /dashboard/production/result, /dashboard/production/plan, /dashboard/production/board, /dashboard/production/board/state
PIS	/pis, /pis/packing, /pis/loading-list, /pis/master, /pis/scan-list, /pis/save-scan, /pis/get-loading-list-data, /pis/get-scans-by-pds
Quality	/quality, /quality/scan, /quality/lookup-kanban, /quality/inspection, /quality/history, /quality/pareto, /quality/approval/{inspection}
Master	/dashboard/master, /dashboard/master/molds*, /dashboard/master/parts*, /dashboard/master/customer-parts*
Injection	/injection, /injection/prdreport, /injection/direct, /injection/mold-check/{moldCode}, /injection/store, /injection/api-stop
Admin/Support	/login, /register, /profile, /settings, /manage-users, /manage-devices, /global-search, /error/log, /error/export
API	/api/production-items, /api/v1/scan/{line}, /api/v1/injection, /api/v1/import, /api/v1/login, /api/v1/production-plan/update-qty

Background Command / Job

Command	Fungsi
sync:loading-lists	Import loading list berdasarkan tanggal dari SQL Server ke database lokal.
sync:external-deliveries	Sinkronisasi data pengiriman dari SQL Server ke MySQL lokal.
update:plan	Update production plan dari external MSSQL dan hitung working/balance time.
generate:plan	Generate production plan.
plan:materialize-static	Materialize static sequences MA001-MA008 ke production_plans untuk tanggal tertentu.
stock:recalc	Hitung ulang production_stocks dari mutations supply - checkout.
send:delivery-unfinished-notification	Kirim peringatan WhatsApp untuk delivery belum selesai melewati Finish Preparation.
send:notification	Kirim notification ke supplier terkait late deliveries.
check:late-deliveries	Cek keterlambatan delivery.
kanban:seed-missing	Seed kanban untuk internal part yang belum punya kanban.
internal-parts:clean-duplicates	Bersihkan duplicate internal parts dengan dry-run option.
photos:update	Update foto berdasarkan nama part.
session:cleanup	Hapus expired sessions di luar web request.

Catatan Teknis & Batasan Audit

Sumber yang dibaca:

- routes/web.php
- routes/api.php
- app/Http/Controllers/*
- resources/views/*
- app/Console/Commands/*

Catatan temuan:

- Ada beberapa view yang tampak legacy/alternatif, misalnya pages/dashboard_.blade.php, pages/production/index_.blade.php, pis/test.blade.php.
- Beberapa endpoint menggunakan GET untuk aksi tulis/edit lama; daftar ini mencatat fitur apa adanya dari kode saat audit.
- Inventory ini berdasarkan source code lokal, bukan validasi permission menu per role di aplikasi live.

Rekomendasi dokumentasi lanjutan:

- Kalau mau jadi dokumen resmi SOP, tambahkan owner modul, role yang boleh akses, dan flow proses per modul.
- Kalau mau jadi backlog teknis, pisahkan fitur aktif, fitur legacy, dan endpoint utility yang tidak muncul di menu.
- Kalau mau lebih presisi, lanjutkan dengan audit menu/permission dari layout sidenav dan database role permission live.
